LESS WIRE, LESS FUSS
- SIMPLY MORE BUZZ

DJ2010

**LESS WIRE, LESS FUSS
- SIMPLY MORE BUZZ**

The SLS DJ2010 USB offers you an unbeatable, all inclusive package of latest entertainment technology. DJ-ing can be fun, creative and easy. No longer it is necessary to drag big record cases or perhaps an industrial PC along to make a difference. Your laptop and DJ2010 USB is all you need.

SLS DJ2010 USB is an intelligent combination of hardware and software working together flawlessly. The retail package includes the installation software, remote control unit, user manual and cables. All packed in one neat package.

SLS DJ2010 USB requires no additional system upgrades - even soundcards are useless since the remote control unit includes two high quality sound modules - integrated to the circuit board and offering crystal clear sound at all times.

Two stereo RCA outputs fitted to the back of the unit. Easy audio access to your mixer and reliable connections.

USB 1.1 compatible, including both USB A and B connectors. Modularity is the way of the future and SLS DJ2010 USB is designed to meet the future demands of DJ's. Professionals working for professionals.

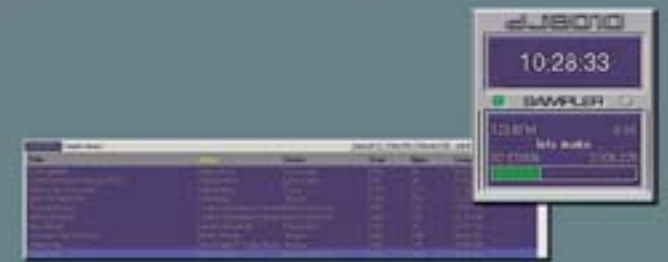

Rip your own music collection to hard drive. The software utilises MP3 files with ID3 v2 tag. The tag editor is supplied with the installation software. The SLS DJ2010 USB is the ONLY all inclusive package available.

How about taking a break? Open the coffee break player, select a set of tracks and leave the rest to the DJ2010 USB. Play songs, loops or samples reversed. Create your own re-mixes with samples and loops along with the songs. Your imagination is the only limit.

Create seamless loops, transport them in to a sampler and use the sampler as a THRID player. Store up to 256 individual cue points per track, choose your favourite skin, edit colour settings and enjoy DJ-ing. Your laptop or desktop is your player, display and record case.

Remote control unit is your unlimited access to the software. Scratch resistant metal casing protects control panel's circuit board, smart button combinations and sophisticated software reduces the number of buttons. All you need and much more at your finger tips.

Sensitive silicone, rubber buttons and fast USB port guarantees instant start. Latency is always the same, no matter how often you boot the computer. USB technology and superb software design offers you stability and reliability.

Wide pitch range ($\pm 4\%$ - $\pm 64\%$) guarantees successful mixing, no matter the BPM difference between two songs. Define your own, individual settings; how do you want the pitch bend buttons to effect on the song, how long the brake / platter effect lasts and scale sampler pitch between -99% and $+100\%$.

Open your laptop and connect the remote control unit to the USB port. Connect RCA cables between your mixer and remote control unit and **START CREATING.**
